#### 7.14.1.4. Data Field

Event data fields SHALL be defined in the form of a struct in a table with the following columns for each field: ID, Name, Type, Constraint, Quality, Default, Conformance.

### 7.14.2. Buffering

Event records SHALL be buffered on the Node, with priority given to events of a higher priority level over a lower priority level. Within a priority level, newer event records SHALL overwrite older event records. The Node SHOULD only overwrite older events if there are newer events created and there is insufficient space to retain both.

### 7.14.3. Event Filtering

Interactions that report event records MAY be filtered by event ID and/or event number.

### 7.14.4. Fabric-Sensitive Event

An entire event MAY be defined as having fabric-sensitive access; otherwise, it SHALL NOT be associated with a fabric.

A read interaction SHALL NOT filter event records, based on fabric, for event records that are not associated with a fabric.

A read interaction SHALL NOT report fabric-sensitive event records that are associated with a fabric different than the accessing fabric.

A fabric-sensitive event SHALL include the global FabricIndex field. For a fabric-sensitive event it is not required to define the FabricIndex field in the event field table.

## 7.15. Atomic Writes

Atomic writes allow a client to make multiple writes to certain sets of attributes atomically, such that changes are either applied entirely or none at all.

### 7.15.1. Atomic Write Flow

<table>
<tr><th>Stage</th><th colspan="2">Action</th><th>Action Flow</th><th>Description</th></tr>
<tr><td rowspan="2">1</td><td colspan="2">Invoke AtomicRequest</td><td>Client ⇒ Server</td><td>Begins atomic write</td></tr>
<tr><td colspan="2">Return AtomicResponse</td><td>Client ⇐ Server</td><td>Acknowledges beginning of atomic write or returns error</td></tr>
<tr><td rowspan="2">2</td><td rowspan="2">Repeated</td><td>Read/Write Request</td><td>Client ⇒ Server</td><td>Reads or writes to attributes</td></tr>
<tr><td>Read/Write Response</td><td>Client ⇐ Server</td><td>Acknowledges write or errors</td></tr>
</table>
