

2.10. Data Model Root	65
2.11. Stack Limits	66
2.11.1. System Model Limits	66
2.11.2. Interaction Model Limits	66
2.12. List of Provisional Items	67
2.12.1. Invoke Wildcard Paths	67
2.12.2. WildcardPathFlags options	67
2.12.3. Tag compression encoding for AttributePathIB, EventPathIB, and AttributeDataIB	67
2.12.4. CacheAndSync Feature on the GroupKeyManagement cluster	67
2.12.5. Joint Fabric	68
2.12.6. Asynchronous transfer in Bulk Data Exchange Protocol (BDX)	68
2.12.7. NFC Transport Layer (NTL)	68
2.12.8. Network Recovery	68
3. Cryptographic Primitives	69
3.1. Deterministic Random Bit Generator (DRBG)	69
3.2. True Random Number Generator (TRNG)	70
3.3. Hash function (Hash)	70
3.4. Keyed-Hash Message Authentication Code (HMAC)	71
3.5. Public Key Cryptography	71
3.5.1. Group	71
3.5.2. Key generation	72
3.5.3. Signature and verification	72
3.5.4. ECDH	74
3.5.5. Certificate validation	74
3.5.6. Time and date considerations for certificate path validation	75
3.6. Data Confidentiality and Integrity	76
3.6.1. Generate and encrypt	77
3.6.2. Decrypt and verify	78
3.7. Message privacy	79
3.7.1. Privacy encryption	79
3.7.2. Privacy decryption	80
3.8. Key Derivation Function (KDF)	80
3.9. Password-Based Key Derivation Function (PBKDF)	82
3.10. Password-Authenticated Key Exchange (PAKE)	83
3.10.1. Computation of pA	85
3.10.2. Computation of pB	85
3.10.3. Computation of transcript TT	86
3.10.4. Computation of cA, cB and Ke	86
4. Secure Channel	89
4.1. General Description	89
4.1.1. Messages	89
