6.2.3. Device Attestation Procedure

The device attestation procedure SHALL be executed by Commissioners when commissioning a device. It serves to validate whether a particular device is certified for Matter compliance and that it was legitimately produced by the certified manufacturer. See [Section 5.5, “Commissioning Flows”](#) for the possible outcomes based on whether the Device Attestation Procedure succeeds or fails to attest the device.

The Device Attestation Certificate Chain MAY be read at any time, either prior to or after receipt of the [AttestationResponse](#). The Commissionee SHALL make the Certificate Chain available whenever requested using [CertificateChainRequest](#). If the Commissioner does not already have this information, to proceed with the validation, it SHALL request the Commissionee’s Device Attestation Certificate Chain using [CertificateChainRequest](#).
