Table 86, “Standard DN Domain Component Object Identifier” lists the context-specific tag defined for the standard DN attribute type used in Matter that is encoded in X.509 certificates as **IA5String**.

Table 86. Standard DN Domain Component Object Identifier

Tag	Matter name	ASN.1 OID
16	domain-component	itu_t(0) data(9) pss(2342) ucl(19200300) pilot(100) pilotAttribute-Type(1) domainComponent(25)

In addition to the standard DN attribute types, there are Matter-specific DN attribute types under the [1.3.6.1.4.1.1.37244](#) private arc. See [Section 6.1.1](#), “Encoding of Matter-specific RDNs” for constraints and examples related to usage of Matter-specific DN attribute types.

6.5.6.2. Matter Certificate Types

The Matter-specific DN attribute types convey information about Matter-specific certificate types as listed in [Table 87](#), “Matter Certificate Types”.

Table 87. Matter Certificate Types

Matter name	Description
matter-node-id	Certifies the identity of a Matter Node Operational Certificate (NOC) .
matter-firmware-signing-id	Certifies the identity of a firmware signing certificate.
matter-icac-id	Certifies the identity of a Matter Intermediate CA Certificate (ICAC) .
matter-rcac-id	Certifies the identity of a Matter Root CA Certificate (RCAC) .
