

all CASE authenticated Nodes.

```
Access Control Cluster: {
  ACL: [
    ...
    1: {
      FabricIndex: 1,
      Privilege: View,
      AuthMode: CASE,
      Subjects: [],
      Targets: []
    }
  ]
}
```

An Administrator adds an Access Control Entry which grants **Manage** privilege, for endpoints 1 and 3, to any Nodes which can authenticate as members of Group 1.

```
Access Control Cluster: {
  ACL: [
    ...
    2: {
      FabricIndex: 1,
      Privilege: Manage,
      AuthMode: Group,
      Subjects: [ 0x0000_0000_0000_0001 ],
      Targets: [ { Endpoint: 1 }, { Endpoint: 3 } ]
    }
  ]
}
```

An Administrator revises this Access Control Entry to grant the same privilege, for only the pump configuration and control cluster (0x0202) on endpoint 3, and for any door lock cluster (0x0101) on the entire Node, to the same Nodes.

```
Access Control Cluster: {
  ACL: [
    ...
    2: {
      FabricIndex: 1,
      Privilege: Manage,
      AuthMode: Group,
```
