

ID	Name	Type	Constraint	Quality	Fallback	Conformance
6	Meta-dataEnabled	bool	all			METADATA
7	SFrameConfig	SFrameStruct	all			P, O

11.5.7.1.1. StreamUsage Field

This field SHALL contain the [StreamUsageEnum](#) that indicates the stream usage for this session and is used per [Resource Management and Stream Priorities](#).

11.5.7.1.2. OriginatingEndpointID Field

This field SHALL indicate the endpoint that originates this command. This endpoint SHALL be used when acting as a client to invoke the commands on the Requestor cluster.

11.5.7.1.3. AudioStreamID Field

This field SHALL indicate the audio stream to use, not use, or let be automatically selected.

- If not present, no audio should be included in the resulting Offer.
- If present and null, then automatic stream assignment or creation is requested.
- If present and a valid audio stream ID, use only this specific stream.

11.5.7.1.4. VideoStreamID Field

This field SHALL indicate the video stream to use, not use, or let be automatically selected.

- If not present, no video should be included in the resulting Offer.
- If present and null, then automatic stream assignment or creation is requested.
- If present and a valid video stream ID, use only this specific stream.

11.5.7.1.5. ICEServers Field

This field SHALL be a list of [ICEServerStruct](#) which contains the ICE servers and their credentials to use for this session. See [ICEServerStruct](#) for further details.

11.5.7.1.6. ICETransportPolicy Field

This field SHALL contain a string which dictates the gathering and usage of ICE candidates. Specifically whether all candidates are used or if restrictions are applied to only use TURN server candidates. It is important for both security and connectivity behavior, as it allows applications to define a preferred approach to network routing and privacy. This field SHALL mirror the acceptable values in the W3C WebRTC API [RTCIceTransportPolicy](#) [<https://www.w3.org/TR/webrtc/#rtcicetransportpolicy-enum>] enum, which are listed below for convenience:
