

Chapter 2. Utility Device Types

This chapter describes the utility device types. The utility device types are summarized in the table below:

Device ID	Device name
0x0016	Root Node
0x0011	Power Source
0x0012	OTA Requestor
0x0014	OTA Provider
0x0013	Bridged Node
0x0510	Electrical Sensor
0x050D	Device Energy Management
0x0019	Secondary Network Interface
0x0130	Joint Fabric Administrator

2.1. Root Node Device Type

This defines conformance for a root node endpoint (see System Model specification). This endpoint is akin to a "read me first" endpoint that describes itself and the other endpoints that make up the node.

- Device types with Endpoint scope SHALL NOT be supported on the same endpoint as this device type.
- Clusters with an Application role SHALL NOT be supported on the same endpoint as this device type.
- Other device types with Node scope MAY be supported on the same endpoint as this device type.

2.1.1. Revision History

Revision	Description
1	Initial revision
2	Added Power Source to device type; Deprecated Power Source Configuration
3	Added restriction on Managed Device feature of Access Control cluster
4	Added conditions and cluster requirements for Time Sync, TLS, and Power Source clusters
