

Device Type ID	Device Type Name	Superset Of	Class	Scope
0x0041	Water Freeze Detector		Simple	Endpoint

7.11.3. Conditions

See the Base Device Type definition for conformance tags.

7.11.4. Cluster Requirements

Each endpoint supporting this device type SHALL include these clusters based on the conformance defined below.

Cluster ID	Cluster Name	Client/Server	Quality	Conformance
0x0003	Identify	Server		M
0x0045	Boolean State	Server		M
0x0080	Boolean State Configuration	Server		O

7.11.4.1. Identify Cluster

This is used to identify the endpoint.

7.11.4.2. Boolean State Cluster

This is used to indicate the state of the sensor/detector.

The state of the Boolean State cluster SHALL reflect the sensor detection using this scheme of:

Value	State
True	Water could potentially freeze in the current ambient conditions
False	Water is very unlikely to freeze in the current ambient conditions

Due to the difficulty in quantifying the risk of freezing based on the dependency on external factors such as temperature, humidity, pressure, etc, the actual triggering of a detector of this type depends on the physical construction and characteristics of the device and is therefore considered manufacturer specific.

7.11.4.3. Boolean State Configuration Cluster

This is used to configure the sensor/detector and is for this device type linked to the configuration of the Boolean State cluster.
