

13.2.6. Device Type Requirements

A Refrigerator SHALL be composed of at least one endpoint with the Temperature Controlled Cabinet device type as defined by the conformance below. There MAY be more endpoints with other device types existing in the Refrigerator.

If the Refrigerator contains more than one instance of a Temperature Controlled Cabinet, those instances SHALL include a semantic tag in the TagList attribute of the Descriptor cluster to disambiguate the cabinet, e.g., "freezer" or "refrigerator". Such a semantic tag SHALL be from either the defined Common or Refrigerator namespaces.

Device Type ID	Device Type Name	Constraint	Conformance
0x0071	Temperature Controlled Cabinet	min 1	M

13.2.7. Cluster Requirements

Each endpoint supporting the refrigerator device type MAY include these clusters based on the conformance defined below.

Cluster ID	Cluster Name	Client/Server	Quality	Conformance
0x0003	Identify	Server		O
0x0052	Refrigerator And Temperature Controlled Cabinet Mode	Server		O
0x0057	Refrigerator Alarm	Server		O

13.2.8. Element Requirements

The table below lists qualities and conformance that override the cluster specification requirements. A blank table cell means there is no change to that item and the value from the cluster specification applies.

Cluster ID	Cluster Name	Element	Name	Constraint	Access	Conformance
0x0052	Refrigerator And Temperature Controlled Cabinet Mode	Feature	OnOff			X
