

feature. The absence of key **CP** SHALL imply a value of 0 (**CP=0**), and indicates that the publisher does not support the Commissioner Passcode feature. The key/value pair **CP=1** SHALL indicate that the publisher supports the Commissioner Passcode feature.

Commissionees SHALL silently ignore TXT record keys that they do not recognize. This is to facilitate future evolution of the Matter Commissioner Discovery protocol specification without breaking backwards compatibility with existing Commissionees that do not implement the new functionality.

4.3.3.1. Examples

The examples below simulate a Matter Commissioner advertising that it is present on the network.

Examples are shown using both the **dns-sd** command-line test tool and the **avahi** command-line test tool. The **dns-sd** command-line test tool is included in all versions of macOS. It is installed as a DOS command with Bonjour for Windows, and is available on Linux by installing the **mDNSResponder package** [<https://github.com/balaji-reddy/mDNSResponder>]. The **avahi** command line-test tool is available from the **Avahi project** [<https://github.com/lathiat/avahi>] for most Linux distributions.

These examples are given for illustrative purposes only.

Consider a device on Wi-Fi using the 48-bit device MAC address of B75AFB458ECD as its host name. DNS-SD records for can be set up as follows:

```
dns-sd -R DD200C20D25AE5F7 _matterd._udp._V123._T35 . 33333 VP=123+456 DT=35
DN="Living Room TV"
```

or

```
avahi-publish-service --subtype=_V123._sub._matterd._udp DD200C20D25AE5F7
_matterd._udp 33333 VP=123+456 DT=35 DN="Living Room TV"
```

This produces DNS-SD messages with the following characteristics:

- Vendor ID is **123**, Product ID is **456**.
- Device type is **35** which is a Casting Video Player (Device Type Identifier 0x0023).
- Device name is **Living Room TV**.

Avahi only sends a single AAAA record. To force the link-local address to be used, use **avahi-publish-address**. For example:

```
avahi-publish-address B75AFB458ECD.local fe80::f515:576f:9783:3f30
```

The DNS-SD service registration command shown above results in the creation of the following Multicast DNS records:

```
_matterd._udp.local. PTR DD200C20D25AE5F7._matterd._udp.local.
```
