5.7. Device Commissioning Flows

This section describes the three different flows for out-of-box commissioning that a Matter device manufacturer may select (while adhering to the restrictions listed in the table in [Section 5.4.2.2, “Announcement Commencement”](#)) for a given product. For each flow, a description is provided which includes actions required to place the device into commissioning mode, fields in the [Onboarding Payload](#) which identify the flow selected by the device manufacturer, fields in the [Distributed Compliance Ledger](#) that provide information used for commissioning and help the Commissioner provide the user with appropriate instructions, and requirements for device packaging relating to the Onboarding Payload. The three flows are the following:

- Standard Commissioning Flow
- User-Intent Commissioning Flow
- Custom Commissioning Flow

Matter device manufacturers SHALL use the [Section 11.23, “Distributed Compliance Ledger”](#) to provide commissioners with information and instructions for both initial and secondary commissioning, and SHOULD use this Ledger to provide links to the user guide, a link to a manufacturer app, and other pre-setup information, to enable an optimal commissioning flow without requiring bilateral arrangements between each commissioner manufacturer and each device manufacturer. Some fields in the Ledger SHALL or SHOULD be populated, depending on the type of commissioning flow, as detailed in the text below and in the [Distributed Compliance Ledger](#) section.

5.7.1. Standard Commissioning Flow

- A Standard Commissioning Flow device SHALL be available for initial commissioning by any Matter commissioner.
- A Standard Commissioning Flow device, when in factory-new state, SHALL start advertising automatically upon power on (see [Commencement](#)).
- A Standard Commissioning Flow device SHALL set [Custom Flow bits](#) in the Onboarding Payload to indicate '0 - Standard Flow'.
- A Standard Commissioning Flow device SHALL follow the rules for [Manual Pairing Code and QR Code Inclusion](#).
- For the case where the device has stopped advertising (e.g. user has powered on the device longer ago than the advertisement period), the manufacturer SHOULD provide guidance about how to bring the device back into advertising mode using the `CommissioningModeInitial-`
