

semantics to the values that imply an ordering relationship.

Value	Priority	Description
0	DEBUG	Information for engineering debugging/troubleshooting
1	INFO	Information that either drives customer facing features or provides insights into device functions that are used to drive analytics use cases
2	CRITICAL	Information or notification that impacts safety, a critical function, or ongoing reliable operation of the node or application supported on an endpoint.

7.19.2.21. Status Code Type

An enumeration value that means a success or error status. A status code is indicated as a response to an action in an interaction (see [Interaction Model Specification](#)).

A status code SHALL be one of:

- a common status code from the set defined in the [Interaction Model status code table](#);
- a cluster status code that is scoped to a particular cluster.

The following table defines the enumeration ranges for status codes.

Status Code Range	Description
0x00	common status code: SUCCESS
0x01	common status code: FAILURE
0x02 to 0x10	cluster scoped status codes
0x70 to 0xCF	other common status codes defined in Interaction Model Status Code Table .

Status codes in an undefined range, or status codes undefined within a range are reserved and SHALL NOT be indicated.

7.19.2.22. Fabric ID Type

A value to identify a fabric.

7.19.2.23. Fabric Index Type

This is an index that maps to a particular fabric on the node, see [Fabric-Index](#). It is used for:
