

Chapter 8. Interaction Model Specification

8.1. Practical Information

8.1.1. Revision History

Please note that Matter revision 1.0 SHALL be considered equivalent to revision 10.

Revision	Description
1	Equivalent to revision 10 (1 st Matter release of the Interaction Model)
2-9	Released as versions of the Zigbee Cluster Library chapter 2 which combined the interaction model with encoding
10	Initial release of this specification (Matter 1.0)
11	Updated Event error processing (Matter 1.2)
12	Added WildcardPathFlags to AttributeDataIB, and associated behavior; added support for multiple CommandDataIB in one Invoke Request
13	Added WildcardFilterConfigurationVersion (Matter 1.3)

8.1.2. Scope & Purpose

This is part of a package of Data Model specifications that are agnostic to underlying layers (encoding, message, network, transport, etc.). Each specification below may be independently maintained. This package, as a whole, SHALL be independently maintained as agnostic and decoupled from lower layers. This package may be referenced by inclusion in vertical protocol stack specifications.

Data Model	Defines first order elements and namespace for endpoints, clusters, attributes, data types, etc.
Interaction Model	Defines interactions, transactions and actions between nodes.
System Model	Defines relationships that are managed between endpoints and clusters.
Cluster Library	Reference library of cluster specifications.
Device Library	Reference library of devices type definitions.

8.1.3. Origin Story

The original baseline for this section comes from the Zigbee Cluster Library [ZCL] Chapter 2 relating to ZCL commands and interactions. This specification addresses these gaps determined by the Data Model Tiger Team:
