

Bit	Code	Feature	Conformance	Summary
0	NODE	NodeTopology	O.a	This endpoint provides or consumes power to/from the entire node
1	TREE	TreeTopology	O.a	This endpoint provides or consumes power to/from itself and its child endpoints
2	SET	SetTopology	O.a	This endpoint provides or consumes power to/from a specified set of endpoints
3	DYPF	DynamicPower-Flow	[SET]	The specified set of endpoints may change

11.8.5. Data Types

11.8.5.1. CircuitNodeStruct Type

This indicates a device on the circuit represented by this server.

Access Modifier: Fabric Scoped							
ID	Name	Type	Constraint	Quality	Fallback	Access	Conformance
1	Node	node-id	all				M
2	Endpoint	endpoint-no	all				O
3	Label	string	max 128				O

Node Field

This field SHALL indicate the ID of a node which is on the electrical circuit represented by this server.

Endpoint Field

This field SHALL indicate the endpoint ID of the [indicated node](#) which is on the electrical circuit represented by this server.
