11.23. Distributed Compliance Ledger

11.23.1. Scope & Purpose

The Connectivity Standards Alliance's DCL (Distributed Compliance Ledger) is a distributed store of information used for tracking certification status and Vendor maintained information such as, but not limited to, product name, product description, and firmware URL. This information is cryptographically secured by digital signatures and is made available via Connectivity Standards Alliance-approved synchronized servers or nodes that are geographically distributed.

The Policies, Procedure and Governance of DCL is maintained by Board approved committees that
