

constraints provided for that certificate type.

11.23.5.2. SerialNumber

The field SHALL be used to identify the serial number field in the Matter certificate structure. A Matter certificate follows the same limitation on admissible serial numbers as in [RFC 5280], i.e., that implementations SHALL admit serial numbers up to 20 octets in length, and certificate authorities SHALL NOT use serial numbers longer than 20 octets in length.

11.23.5.3. Issuer

The field SHALL be used to identify the Certificate Authority that issues the certificate. For a [Operational Root CA Certificates \(RCAC\)](#), this field is OPTIONAL because Issuer and Subject are the same.

11.23.5.4. AuthorityKeyID

The authority key identifier extension provides a means of identifying the public key corresponding to the private key used to sign a Matter certificate. This is OPTIONAL for [Operational Root CA Certificates \(RCAC\)](#).

11.23.5.5. RootSubject

This field SHALL contain the PAA certificate's **Subject** field, as defined [Operational Root CA Certificates \(RCAC\)](#). This is OPTIONAL for [Operational Root CA Certificates \(RCAC\)](#). This is encoded as defined in [Section 6.1, "Certificate Common Conventions"](#).

11.23.5.6. RootSubjectKeyID

This field SHALL uniquely identify the PAA certificate's **Subject Key Identifier** mandatory extension. It is defined in [PAA Certificate](#) and [Operational Root CA Certificates \(RCAC\)](#). This is OPTIONAL for [Operational Root CA Certificates \(RCAC\)](#). This is encoded as defined in [Section 6.1, "Certificate Common Conventions"](#).

11.23.5.7. Owner

This field uniquely identifies the DCL key that was used to register the certificate in DCL, pursuant to DCL policies.

11.23.5.8. IsRoot

This field SHALL indicate whether the associated certificate is a [Operational Root CA Certificate \(RCAC\)](#).

11.23.5.9. IsVidVerificationSigner

This field SHALL indicate whether the associated certificate is a [Vendor Verification Signer Certificate \(VVSC\)](#) used to sign **vid_verification_statement** messages as defined in [Section 6.4.10, "Fabric Table Vendor ID Verification Procedure"](#).

WARNING

TODO: This is why **IsRoot** should not have been a **bool**, but rather an enum
