

This list must include, at a minimum, one group with GroupCAT value set to [Administrator CAT](#) and one group with GroupCAT value set to [Anchor CAT](#).

11.24.6.7. NodeList Attribute

This SHALL indicate the list of nodes in the [Joint Fabric](#) for the accessing fabric.

11.24.6.8. AdminList Attribute

This SHALL indicate the list of administrators in the [Joint Fabric](#) for the accessing fabric.

Only one Administrator may serve as the Anchor Root CA and Anchor Fabric Administrator and SHALL have index value 0. All other [Joint Fabric](#) Administrators SHALL be referenced at index 1 or greater.

A null value or empty list indicates that the [Joint Fabric](#) is not yet formed.

11.24.6.9. Status Attribute

This SHALL indicate the current state of the [Joint Fabric](#) Datastore Cluster for the accessing fabric.

The **Committed** status indicates the DataStore is ready for use. The **Pending** status indicates that the DataStore is not yet ready for use. The **DeletePending** status indicates that the DataStore is in the process of being transferred to another [Joint Fabric](#) Anchor Administrator.

11.24.6.10. EndpointGroupIDList Attribute

This SHALL indicate the group membership of endpoints in the accessing fabric.

Any changes to this List (add/remove entry) must follow the pending → committed workflow with current state reflected in the Status Entry.

11.24.6.11. EndpointBindingList Attribute

This SHALL indicate the binding list for endpoints in the accessing fabric.

Any changes to this List (add/remove entry) must follow the pending → committed workflow with current state reflected in the Status Entry.

11.24.6.12. NodeKeySetList Attribute

This SHALL indicate the KeySet entries for nodes in the accessing fabric.

Any changes to this List (add/remove entry) must follow the pending → committed workflow with current state reflected in the Status Entry.

11.24.6.13. NodeACLList Attribute

This SHALL indicate the ACL entries for nodes in the accessing fabric.

Any changes to this List (add/remove entry) must follow the pending → committed workflow with current state reflected in the Status Entry.
