

3.2.7.16. ColorLoopTime Attribute

This attribute SHALL indicate the number of seconds it SHALL take to perform a full color loop, i.e., to cycle all values of the EnhancedCurrentHue attribute (between 0 and 65534).

3.2.7.17. ColorLoopStartEnhancedHue Attribute

This attribute SHALL indicate the value of the EnhancedCurrentHue attribute from which the color loop SHALL be started.

3.2.7.18. ColorLoopStoredEnhancedHue Attribute

This attribute SHALL indicate the value of the EnhancedCurrentHue attribute before the color loop was started. Once the color loop is complete, the EnhancedCurrentHue attribute SHALL be restored to this value.

3.2.7.19. ColorCapabilities Attribute

This attribute SHALL indicate the color control capabilities of the device.

Bits 0-4 of the ColorCapabilities attribute SHALL have the same values as the corresponding bits of the FeatureMap attribute. All other bits in ColorCapabilities SHALL be 0.

3.2.7.20. ColorTempPhysicalMinMireds Attribute

This attribute SHALL indicate the minimum mired value supported by the hardware. ColorTempPhysicalMinMireds corresponds to the maximum color temperature in kelvins supported by the hardware.

ColorTempPhysicalMinMireds $\leq$ ColorTemperatureMireds.

3.2.7.21. ColorTempPhysicalMaxMireds Attribute

This attribute SHALL indicate the maximum mired value supported by the hardware. ColorTempPhysicalMaxMireds corresponds to the minimum color temperature in kelvins supported by the hardware.

ColorTemperatureMireds $\leq$ ColorTempPhysicalMaxMireds.

3.2.7.22. CoupleColorTempToLevelMinMireds Attribute

This attribute SHALL indicate a lower bound on the value of the ColorTemperatureMireds attribute for the purposes of coupling the ColorTemperatureMireds attribute to the CurrentLevel attribute when the CoupleColorTempToLevel bit of the Options attribute of the Level Control cluster is equal to 1. When coupling the ColorTemperatureMireds attribute to the CurrentLevel attribute, this value SHALL correspond to a CurrentLevel value of 254 (100%).

This attribute SHALL be set such that the following relationship exists:

ColorTempPhysicalMinMireds $\leq$ CoupleColorTempToLevelMinMireds $\leq$ ColorTemperatureMireds

Note that since this attribute is stored as a micro reciprocal degree (mired) value (i.e. color temperature in kelvins = $1,000,000 / \text{CoupleColorTempToLevelMinMireds}$), the CoupleColorTempToLevelMinMireds attribute corresponds to an upper bound on the value of the color temperature
