

4.3.8.27.5. Transitions Field

This field SHALL specify a list of transitions for the schedule.

This field SHALL NOT contain more than one [ScheduleStruct](#) with the same [TransitionTime](#) field and overlapping [DayOfWeek](#) fields; i.e. there SHALL be no duplicate transitions.

If the [NumberOfScheduleTransitionPerDay](#) attribute is not null, then for each bit in [ScheduleDay-Of-WeekBitmap](#), the number of transitions with that bit set in [DayOfWeek](#) SHALL NOT be greater than the value of the [NumberOfScheduleTransitionPerDay](#) attribute.

For the purposes of determining which [ScheduleStruct](#) in this list is currently active, the current time SHALL be the number of minutes past midnight in the display value of the current time, not the actual number of minutes that have elapsed since midnight. On days which transition into or out of daylight saving time, certain values may repeat or not occur during the transition period.

A [ScheduleTransitionStruct](#) in this list SHALL be active if the current day of the week matches its [DayOfWeek](#) field and the current time is greater than or equal to the [TransitionTime](#), but less than the [TransitionTime](#) on any other [ScheduleTransitionStruct](#) in the [Transitions](#) field whose [Day-Of-Week](#) field also matches the current day of the week.

If the current time is less than every [ScheduleTransitionStruct](#) whose [DayOfWeek](#) field also matches the current day of the week, the server SHALL attempt the same process to identify the active [ScheduleTransitionStruct](#) for the day preceding the previously attempted day of the week, repeating until an active [ScheduleTransitionStruct](#) is found or the attempted day is the current day of the week again. If no active [ScheduleTransitionStruct](#) is found, then the active [ScheduleTransitionStruct](#) SHALL be the [ScheduleTransitionStruct](#) with the largest [TransitionTime](#) field from the set of [ScheduleTransitionStructs](#) whose [DayOfWeek](#) field matches the current day of the week.

4.3.8.27.6. BuiltIn Field

This field SHALL indicate whether the schedule is marked as "built-in", meaning that it can be modified, but it cannot be deleted.

4.3.8.28. ScheduleTransitionStruct Type

ID	Name	Type	Constraint	Quality	Fallback	Access	Conformance
0	Day-Of-Week	Schedule-Day-Of-Week-Bitmap	desc				M
1	TransitionTime	uint16	max 1439				M
2	Pre-setHandle	octstr	max 16				[PRES]
