

This alarm SHALL be cleared only when the door is closed (manual action).

If the generation of the alarm is suppressed at the device itself, then bit 0 SHALL have a value of 0. It SHALL be re-set to 1 if the alarm is re-enabled at the device itself.

8.8.7. Commands

ID	Name	Direction	Response	Access	Conformance
0x01	ModifyEnabledAlarms				X

8.9. Laundry Dryer Controls Cluster

This cluster provides a way to access options associated with the operation of a laundry dryer device type.

8.9.1. Revision History

The global ClusterRevision attribute value SHALL be the highest revision number in the table below.

Revision	Description
1	Initial revision

8.9.2. Classification

Hierarchy	Role	Scope	PICS Code
Base	Application	Endpoint	DRYERCTRL

8.9.3. Cluster ID

ID	Name
0x004A	Laundry Dryer Controls

8.9.4. Data Types

8.9.4.1. DrynessLevelEnum Type

This data type is derived from enum8.

This enum provides a representation of the level of dryness that will be used while drying in a selected mode.

It is up to the device manufacturer to determine the mapping between the enum values and the corresponding temperature level.
