

11.2.6.11.12. OSDEnabled Field

This field indicates the status of the OSD (On-Screen Display) for the specific video stream. An Enabled value of TRUE means that OSD has been enabled for that stream.

11.2.6.11.13. ReferenceCount Field

This field SHALL indicate the number of entities currently using this video stream. The node SHALL recompute this field to reflect the correct value at runtime (e.g., when restored from a persisted value after a reboot).

11.2.6.12. AudioStreamStruct Type

This struct is used to capture all constituent parameters of an audio stream in order to fully characterize it.

ID	Name	Type	Constraint	Quality	Fallback	Access	Conformance
0x00	AudioStreamID	AudioStreamIDType	all				M
0x01	StreamUsage	StreamUsageEnum	all				M
0x02	AudioCodec	AudioCodecEnum	all				M
0x03	ChannelCount	uint8	1 to 8				M
0x04	SampleRate	uint32	min 1				M
0x05	BitRate	uint32	min 1				M
0x06	BitDepth	uint8	8, 16, 24, 32				M
0x07	ReferenceCount	uint8	all				M

11.2.6.12.1. AudioStreamID Field

This field SHALL indicate the uniquely allocated identifier for the audio stream.

11.2.6.12.2. StreamUsage Field

This field SHALL indicate the usage of stream as described in [StreamUsageEnum](#).

11.2.6.12.3. AudioCodec Field

This field SHALL indicate the type of audio codec being used by the corresponding audio stream as described in [AudioCodecEnum](#).
