0x0038	Time Synchronization	Feature	TimeZone			TimeSyncWithTZCond, O
0x0046	ICD Management	Feature	LongIdleTimeSupport			LIT

2.1.6.1. Access Control MNGD Conformance

The MNGD (Managed Device) feature of the Access Control Cluster on the device's Root Node endpoint is restricted to devices that contain an Application Endpoint type that explicitly permits its use, such as the Network Infrastructure Manager device type (Device Type ID 0x0090).

2.1.7. Endpoint Composition

A Root Node endpoint's Descriptor cluster PartsList attribute SHALL contain a list of all other endpoints on the node, i.e. the full-family pattern defined in the System Model specification.

2.2. Power Source Device Type

A Power Source device type provides information about the source of power.
