

7.12.4.2. Boolean State Cluster

This is used to indicate the state of the sensor/detector.

The state of the Boolean State cluster SHALL reflect the sensor detection using this scheme of:

Value	State
True	Water leak detected
False	No water leak detected

7.12.4.3. Boolean State Configuration Cluster

This is used to configure the sensor/detector and is for this device type linked to the configuration of the Boolean State cluster.

7.12.5. Element Requirements

The following table lists qualities and conformance that override the cluster specification requirements. A blank table cell means there is no change to that item and the value from the cluster specification applies.

Cluster ID	Cluster Name	Element	Name	Constraint	Access	Conformance
0x0045	Boolean State	Event	StateChange			M

7.13. Rain Sensor Device Type

This defines conformance to the Rain Sensor device type.

7.13.1. Revision History

Revision	Description
1	Initial revision

7.13.2. Classification

Device Type ID	Device Type Name	Superset Of	Class	Scope
0x0044	Rain Sensor		Simple	Endpoint

7.13.3. Conditions

See the Base Device Type definition for conformance tags.
