0x0204	Thermostat User Interface Configuration	Attribute	Keypad-Lockout			O	

13.4. Temperature Controlled Cabinet Device Type

A Temperature Controlled Cabinet only exists composed as part of another device type. It represents a single cabinet that is capable of having its temperature controlled. Such a cabinet may be chilling or freezing food, for example as part of a refrigerator, freezer, wine chiller, or other similar device. Equally, such a cabinet may be warming or heating food, for example as part of an oven, range, or similar device.

13.4.1. Revision History

Revision	Description
1	Initial revision
2	Extension to heating cabinets
3	Added exclusivity for conditions
4	Mandate OperationCompletion Event for Oven Cavity Operational State cluster
5	Made TemperatureNumber (TN) the only valid temperature control mode

13.4.2. Classification

Device Type ID	Device Type Name	Superset Of	Class	Scope
0x0071	Temperature Controlled Cabinet		Simple	Endpoint

13.4.3. Conditions

This device type SHALL support the following conformance conditions as defined below.

Condition	Description
Cooler	The device has cooling functionality.
Heater	The device has heating functionality.
